

# Pollinator Paradise

## How to Create a Biodiverse Backyard

The needs of wildlife are very similar to our own!

### Food

Providing a variety of food sources allows pollinators to have energy to navigate the urban environment.

### Water

Establishing a water source ensures pollinators have a drinking water and a place to bathe.

### Nursery

All species need a safe place where their young can grow without being disturbed or threatened by predators.

### Cover

Leaf litter and pithy stems provide shelter for pollinators to overwinter and escape the Texas heat.

## Additional Tips

Harvest Rainwater

Cover Your Soil

Limit Pesticide Use

# Create a buzz with these Pollinator Powerhouses!

This selection of native Blackland Prairie plants provides a variety of bloom colors and textures during several months of the growing season.

**Purple Prairie Clover**  
(*Dalea purpurea*)

**Black-eyed Susan**  
(*Rudbeckia hirta*)

**Cutleaf Daisy**  
(*Engelmannia peristenia*)

**Butterfly Milkweed**  
(*Asclepias tuberosa*)

**White Heath Aster**  
(*Symphyotrichum ericoides*)

**Standing Cypress**  
(*Ipomopsis rubra*)

**Play**  
**FRISCO**
